# Introduction

- The following is a list of Ash Trees located on Village parkway and Municipal owned park areas. Addresses and size measured by DBH (Diameter at Breast Height) are included. The trees are divided into three categories.

# Category 1

- Ash trees that are 10" DBH or less. These trees can be treated with a soil drenching insecticide at a cost of \$6.00 per tree
- 51 trees @ \$6.00 = \$306.00
- This application must be done every spring.

## Category 2

- Ash trees that are greater than 10" DBH. These trees need to be treated with a trunk injected insecticide at a cost of \$63.00 per tree.
- 19 trees @ \$63.00 = \$1,197.00
- This application must be done every two years during spring.

## Category 3

- Ash trees that should be removed. The majority of these trees should be replaced. The average cost for removal and replacement is approximately \$450.00 per tree.
- 8 trees @ \$450.00 = \$3,600.00

- The proposed plan includes insecticide applications to be done in-house by Public Works Department staff.
- Eventually Ash trees in category 1 will move to category 2. Tree DBH will increase approximately ½" per year. Some trees will move into category 3 and will need to be removed. The success rate on treatments is about 80%. There is an additional nine Ash trees in the southeast corner of Blackhawk Park that should eventually be removed. Replacements will not be necessary. The cost for those removals is estimated to be approximately \$1,500.00.
